

Education & Skills

Bachelor of Science (Hons.) in Computer Science, The University of Hull

Languages	C#, SQL, Javascript/Typescript, Python
Frameworks	.NET Core, MVC/Razor/Blazor, Web API, EF Core, Angular, React, Node.js, Hangfire, ShopifySharp
Cloud	Docker, K8s, Azure CI/CD, Azure Functions, AWS, Google Cloud, Jenkins, NixOS, DataDog, Tailscale
AI/LLM	Spec-Driven Development, Claude Code, OpenCode, Zed, Cursor, LocalLM
Leadership	Team leadership (up to 8), direct line management, building autonomy & ownership, mentoring
Collaboration	Technical writing, cross-team communication, client & vendor liaison, peer onboarding, end-user support

Experience & Achievements

- Jan 2025 – **RADD Solutions**, *Senior Developer*, Remote - Woodmansey
- Dec 2025 Supporting the huge variety of systems underpinning UK public transport. Building with NixOS and .Net Core.
- Implemented and delivered substantial technical/functional capabilities as part of cloud transition work for a government body. Led restoration from prior phases, shared infrastructure bootstrapping, multi-part, multi-cloud lift/shift implementation & validation, documentation and peer onboarding.
 - Restored CI/CD pipeline and complex project infrastructure spanning AWS (IAM & Authentication, Domains), Azure (Pipeline, Repos) and Google Cloud (Firewall, K8s + containers, Storage, Virtual Machines). Migrated key workflows away from bespoke infrastructure to the cloud environment.
 - Other successful projects included end-to-end delivery of a data source migration for a train operator's incident reporting pipeline and a proof-of-concept MicroPython > Websockets -> .Net stack on embedded hardware.
- Feb 2024 – **Agilio Software**, *Lead Engineer*, Remote - Newcastle
- Nov 2024 Automation of data extraction and payroll for the dental industry. Worked on security enhancements, assisted in incident response, and reverse-engineered legacy functionality to support modernisation efforts.
- Sept 2021 – **ResDiary**, *Team Lead*, Remote - Glasgow
- Dec 2023 A hospitality platform serving millions of diners worldwide.
- Promoted 4 times in 2 years. Joined as a senior engineer, progressing through a hybrid product/engineering role to team lead. Led a team of eight modernising our offering for third-party developers and integrators.
 - Tech stack: .NET Core, Web API, SQL/EF, React, Docker, Azure CI/CD, K8s, DataDog
- Jan 2019 – **VentureAxis**, Leeds
- Sept 2021 Architect, developer and client contact on projects for the largest independent music distributor in the UK.
- Designed and built a Shopify application providing true one-click order fulfilment. Real-time integration processes webhook notifications, forwards orders and notifies Shopify when orders are despatched. Dashboard allows detailed management, review and approval of orders.
 - Designed and built a mailshot system for album release announcements. Templated e-mail generation, client-side preview and PDF generation via Docker & Azure Functions.
 - Built a high-throughput data feed pipeline and PDF microservice for a sports industry client, and major portions of a custom B2B e-commerce solution with real-time pricing of millions of products.
- Nov 2015 – **Ctrack (Inseego Corp.)**, Leeds
- Jan 2019 A global telematics company with 1M+ units across 50+ countries. Full-stack development role focused on bespoke products and tools for the UK and European markets.
- Developed an application enabling field engineers on mobile devices to independently commission tracking units, with back-office staff able to support remotely. Automated data-gathering and task closure.
 - Built bulk customer import tools and CI/CD (Jenkins, Octopus Deploy) for one-click build, test and deployment.
- Feb 2013 – **Oracle Corporation**, Melton
- Nov 2015 Worked on *FRS-POS*, a specialised point of sale and stock logistics platform for the furniture retail industry (acquired by Oracle via *MICROS Systems* in 2014). Delivered feature sets across six major releases driving a UNIX-to-.NET migration, handled third-line support on live systems, and built licence management tooling to shorten maintenance windows.
- Early roles (2011–2013) abridged. Full work history available on request.*

Personal Projects

- UK Bus Map A [web application](#) developed with Claude Code, displaying UK-wide real-time bus locations via the Bus Open Data Service API. Includes an aircraft overlay, geolocation and street-level route animation. Containerised with Docker Compose and deployed via Tailscale Funnel.
- Aircraft Tracker I use RTL-SDR (software-defined radio) to decode [ADS-B transponder signals from aircraft](#), feeding real-time position data to community tracking networks.
- Homelabbing I run a ZFS NAS for media storage, with several Raspberry Pi's for home projects. Network-wide adblock is provided by OpenWRT. More about some of these can be found at [adamjames.me](#).
